

Track — iNSIGHTS DeepSearch × Project HUB Challenge

Powered by [iNSIGHTS by Thore Network]

“Search Less. Build More.”

Build an AI-powered execution workflow using **iNSIGHTS Layer 2 DeepSearch** and **Project HUB** that solves a real-world problem faster, smarter, and more efficiently than traditional search + manual planning methods.

Participants must use:

* **DeepSearch** → for research, reasoning, live intelligence gathering, and structured insights
* **Project HUB** → for execution planning, task breakdowns, workflows, collaboration, and MVP architecture

Challenge Theme

Traditional AI tools help users *find answers*.
The next generation of AI should help users *finish tasks*.

Your challenge is to create a working prototype, workflow engine, or AI-assisted system where:

- > DeepSearch discovers intelligence
- > AND
- > Project HUB converts it into execution.

Mandatory Usage Criteria

Every submission must demonstrate:

1. DeepSearch Usage

Use DeepSearch for at least one of:

- * Multi-source research
- * Market analysis
- * Technical reasoning
- * Competitive intelligence
- * Live web/context aggregation

- * Decision support
- * AI-assisted planning

2. Project HUB Usage

Use Project HUB for:

- * Task generation
- * Workflow management
- * Kanban/task orchestration
- * AI project architecture
- * Team collaboration flow
- * Milestone tracking
- * MVP execution roadmap

Example Domains

Participants may build solutions for:

- * AI Productivity
- * FinTech
- * HealthTech
- * ClimateTech
- * Smart Mobility
- * Road Safety
- * Campus Tech
- * Creator Economy
- * Trading & Analytics
- * Startup Automation
- * AI Agents
- * Student Workflow Systems

Bonus Points If Teams Build

- * Autonomous AI execution flows
- * AI agent collaboration systems
- * Voice-powered DeepSearch
- * Real-time web intelligence systems
- * Multi-user Project HUB workflows
- * AI-generated GTM/project plans

- * Predictive reasoning engines
- * AI-powered research-to-MVP pipelines

Evaluation Criteria

Criteria	Weightage
-----	-----
Innovation & Originality	25%
DeepSearch Intelligence Usage	20%
Project HUB Execution Flow	20%
Real-world Utility	15%
UI/UX & Product Thinking	10%
Scalability & AI Integration	10%

Deliverables

Teams must submit:

- * Working prototype / MVP
- * DeepSearch workflow demo
- * Project HUB execution board
- * 3-minute presentation/demo
- * Problem statement & market fit
- * Future scalability vision

One-Line Brief

- > “Don’t just build an AI app.
- > Build an AI execution engine.”
